

What is claimed is:

Subay

1. A printer-incorporated electronic still camera comprising an imaging device, a memory, a printing device, a display device, and a mode selection device for switching over the still camera between a photography mode for converting optical images into electronic image signals through the imaging device and storing the image signals in the memory, a reproduction mode for displaying still images on the display device based on the image signals read out from the memory, a print mode for printing the displayed still image on a recording medium, and a setup mode for setting up many kinds of setup items of the still camera, wherein the setup items are sorted into a plurality of groups, and the display device displays the setup items of one group at a time in the setup mode.

2. A printer-incorporated electronic still camera as claimed in claim 1, further comprising an acceleration sensor and a device for judging by signals from the acceleration sensor whether the still camera is in a stable position or in an unstable position, and controlling the display device to display a group of setup items that relate to the photography mode initially if the still camera is judged to be in the unstable position when the setup mode is selected, or a group of setup items that relate to the print mode initially if the still camera is judged to be in the stable position when the setup mode is selected.

3. A printer-incorporated electronic still camera as claimed in claim 1, further comprising a lens shielding device for shielding a lens of the imaging device from external light, and a detection device for detecting whether or not the lens is shielded by the lens shielding device, and a control device for controlling the display device to display a group of setup items that relate to the photography mode initially if the lens is not shielded when the setup mode is selected, or a group of setup items that relate to the print mode initially if the lens is shielded when the setup mode is selected.

4. A printer-incorporated electronic still camera as claimed in claim 1, further comprising a detection device for detecting whether or not the recording medium is loaded in the still camera, and a control device for controlling the display device to display a group of setup items that relate to the photography mode initially if the still camera is not loaded with the recording medium when the setup mode is selected, or a group of setup items that relate to the print mode initially if the still camera is loaded with the recording medium when the setup mode is selected.

5. A printer-incorporated electronic still camera as claimed in claim 4, wherein the recording medium is a self-development type photo film sheet, and the still camera is provided with a pack loading chamber for loading a film pack that contains a plurality of said photo film sheets therein,

ay
cont

wherein the detection device is located in the pack loading chamber to detect whether the film pack is loaded or not.
